

FIBER OPTIC SPLICING WORKSTATION

A Portable & Convenient Workstation for the Mobile Fiber Optic Technician

This next generation fiber splicing workstation has a large work surface that works well at most any fiber work site, inside or out. The heavy duty steel legs lock firmly to keep your table secure at either sitting height or standing height. The work surface can also be mounted to an existing wall-mounted box or aerial cables for use in a bucket truck with the proper accessory kit. A universal screw mount enables your fusion splicer to be affixed to the work surface if it is equipped with a screw mount.

Conveniently located slots and holes are molded into the table to easily manage and keep track of tools, parts, splicing sleeves and other splicing equipment. The recessed area prevents small pieces from rolling off. The table folds up flat for quick and easy transportation and storage. No matter where your fiber splicing duties take you, this rugged and portable splicing workstation will become critical to your splicing environment.

BENEFITS AND FEATURES

- Portable dual height workstation enables sitting and standing height options
- Compact fold flat design with large work surface
- Built-in cable management slots and holes for tool storage and clamping
- Cable management attachment included with standard package
- Heavy duty steel legs. Optional wheel kit shown
- Quick-attach standoffs for aerial mount or when utilizing an existing wall mount box
